## ABSTRACT

The present invention relates to the finding that peptides derived from a specific domain of tumor necrosis factor-alpha (TNF- $\alpha$ ) can efficiently be used to treat oedema. More specifically, the present invention relates to the usage of peptides derived from the region of human TNF- $\alpha$  from Ser<sup>100</sup> to Glu<sup>116</sup> to treat pulmonary oedema. Moreover, the present invention concerns a circularized peptide having amino acid sequence CGQRETPEGAEAKPWYC which is very efficient in inducing oedema resorption.
